Introduction

What does it do?

Drag Drop mass upload is a backend module offering mass upload of file and folders in Typo3 (standard or/and DAM enabled).

Upload any number of files / folders / subfolders (limited to 300MB per upload)

Requirements

Java Virtual machine plugin for your browser >= 1.5.0

Screenshot: Standard file module

The screenshot shows the 'Standard file module' interface. On the left is a file tree for 'fileadmin/' with folders like 'Images', 'Sonovision', 'TEMP', and 'bobby'. The right pane is titled 'Drag drop mass upload' and shows the current folder as '/fileadmin/Images'. It features a large 'TYPO3' logo and a drop zone with the text 'Drop files/folders on the image above'. Below the drop zone, it states: '> Max size per single file: 9MB' and '> Ready for mass upload'.

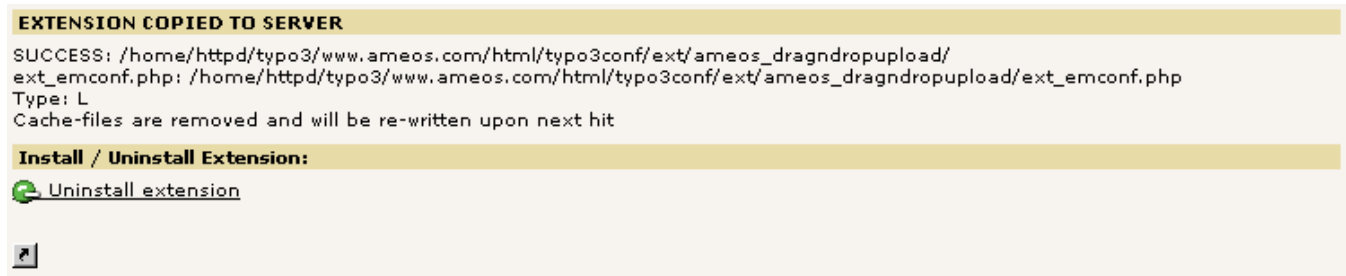

Screenshot: DAM Digital Asset Management

The screenshot shows the 'DAM Digital Asset Management' interface. The left file tree is similar to the first screenshot but includes folders like 'truant_temp2', 'truant_tempold1', and 'truant_tempold2'. The right pane is titled 'File' and has tabs for 'List', 'Upload', and 'Mass upload'. The 'Mass upload' tab is active, showing the current folder as '/fileadmin/bobby/'. It features the same 'TYPO3' logo and drop zone as the first screenshot, with the text 'Drop files/folders on the image above' and the same file size and readiness information: '> Max size per single file: 9MB' and '> Ready for mass upload'.

Accessible in a new tab "Mass upload" in File module of DAM.

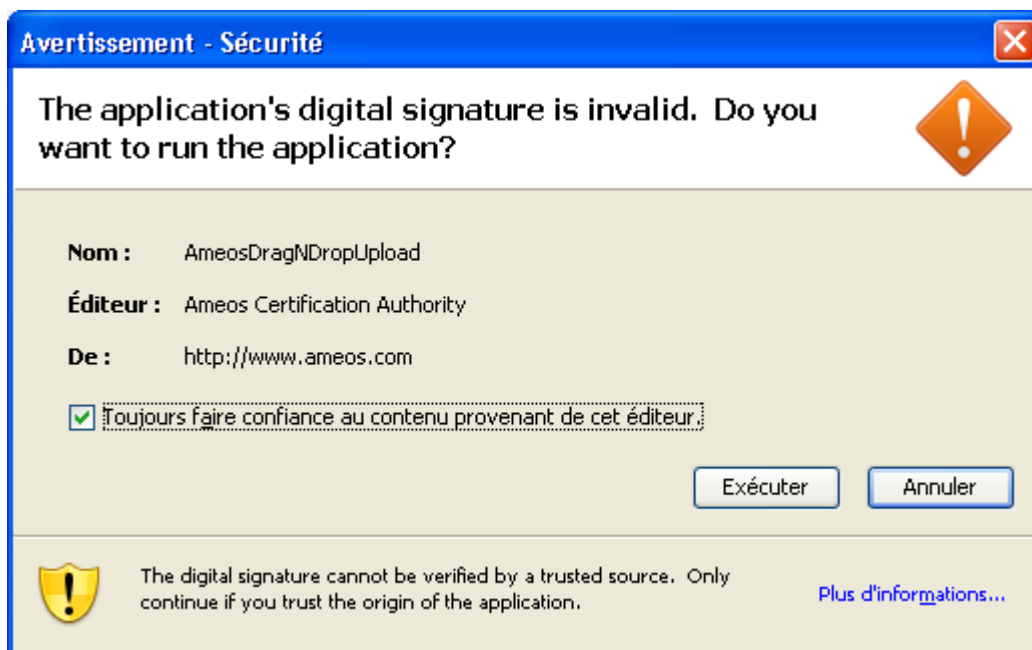

Users manual

Install the extension

Go to the standard File module OR Images module OR DAM file module and click on “Mass Upload” menu

The first time you will have to accept the SSL certificate

Select the files to upload and drap them over the upload area

Changelog

- 2006-03-27 : First release
- 2006-03-29 : Progress bar + JAVA source code
- 2006-04-12 : Clickmenu entry added
- 2007-02-26: Integration in DAM + folder upload + better look and feel (**all sponsored by <http://snowflake.ch>**)
